WPS Office
Make It Simple

WPS Software Accelerates Smart Office Innovation with Generative AI, Deploying AI Features in Just 2 Months

Discover how WPS Software built smart office generative AI features on Amazon Bedrock to transform productivity, launching key innovations swiftly and driving efficiency.

Millions

of users benefited from the first launch of the AI feature

Overview

[WPS Software](#), a global provider of office productivity software, supports millions of users worldwide with its flagship product, WPS Office. Driven by its "All in AI" initiative, WPS Software launched WPS AI, an intelligent assistant embedded in WPS Office, designed to enhance smart office capabilities with features like advanced spell check, document polishing, and automated PowerPoint generation. WPS Software selected Amazon Web Services (AWS) for its robust, scalable infrastructure and diverse AI model options. By deploying WPS AI on AWS, WPS Software achieved a 30 percent increase in R&D efficiency and a 35 percent reduction in operational costs, delivering transformative AI-driven tools that enhance productivity and user experience across its global user base.

Opportunity | Exploring Generative AI to Lead in Smart Office Innovation

WPS Software, a global provider of office software with over 35 years of experience, serves millions of users worldwide through its flagship product, WPS Office. Recognizing the rapid advancements in AI technology and the potential for intelligent assistance within office software, WPS Software identified an opportunity to explore generative AI applications that could position the company as a leader in smart office innovation. In 2023, the company launched its "All in AI" initiative, focused on integrating generative AI into its products to create a more intuitive and intelligent user experience.

However, implementing generative AI in office software presented several complex challenges. WPS Software needed to evaluate and select suitable language models, manage model accuracy by reducing hallucinations, and

adapt prompts effectively to ensure high-quality user interactions. Additionally, ensuring compatibility across platforms, optimizing AI model costs, and maintaining global data security and compliance were critical. The company also faced a shortage of AI talent and the need for rigorous performance evaluation to uphold quality and efficiency standards in generative AI applications.

Since the start of its overseas operations, WPS Software has relied on AWS to support over 60 percent of its international infrastructure, including WPS Office, the WPS international website, and desktop versions of its applications. This solid foundation with AWS provided WPS Software with the stability needed to explore generative AI on AWS confidently.

Solution | Developing an All-in-One Smart Office System with Amazon Bedrock

To advance its AI-driven strategy, WPS Software introduced WPS AI for international users, integrating it directly into WPS Office as a versatile AI assistant. Powered by [Amazon Bedrock](#), WPS AI focuses on three primary areas: AIGC for content generation, Copilot for smart assistance, and Insight for knowledge extraction. WPS AI's core features—such as advanced spell check, content rewriting, and automated PowerPoint generation—are built using Anthropic's [Claude 3](#) large language model (LLM) in Amazon Bedrock. With Claude 3's extensive context window of up to 200,000 tokens, WPS AI can deliver reliable content generation, refining, and management capabilities to users, significantly boosting productivity across everyday office tasks.

Using Claude 3 as its underlying language model, WPS AI streamlines workflows and task management, assisting users in various aspects of content creation and enhancing user efficiency. For knowledge extraction, WPS AI utilizes Claude 3 to help users analyze and interpret data, supporting informed decision-making within WPS Office. Amazon Bedrock provides WPS Software with a unified API for selecting and evaluating models, enabling WPS AI to rapidly test and deploy models suited to specific business needs. “Based on WPS Software’s business needs, we’ve found that choosing the right, cost-effective LLMs brings more benefits than pursuing the most advanced or powerful models in the industry,” explained Ning Zhang, vice president of Global Business at WPS Software. “Amazon Bedrock provides us with diverse models, making it easy to find options that align with our objectives.”

In addition to Amazon Bedrock, core AWS services such as [Amazon CloudFront](#), [Amazon Elastic Container Registry](#) (Amazon ECR), [Amazon Elastic Kubernetes Service](#) (Amazon EKS), [Amazon CloudWatch](#), [AWS Identity and Access](#)

[Management](#) (IAM), and [Amazon Simple Storage Service](#) (Amazon S3) provide the backend infrastructure to support WPS AI's operations. This infrastructure ensures scalability, performance, and security for WPS Software's extensive backend needs, enabling them to deliver a robust AI experience to millions of international users.

Responsible AI and data security are also central to WPS AI's deployment. AWS's responsible AI practices, particularly within Amazon Bedrock, help protect the privacy of WPS Software's international users. Data in WPS AI remains solely within WPS Office, is excluded from model training, and is encrypted in transit and at rest, ensuring that sensitive information stays secure. AWS's compliance with more than 140 security standards and provision of over 300 security services globally further aids WPS Software in meeting regional data protection regulations.

AWS collaborated closely with WPS Software throughout the integration process, engaging science and strategy experts from the Generative AI Innovation Center and solution architects to work alongside WPS in developing a technical roadmap. This close collaboration enabled WPS Software to overcome deployment challenges and ensured the rapid, successful rollout of WPS AI, delivering a reliable, intelligent assistant that transforms productivity across office applications.

Outcome | Achieving 30% Efficiency Gains and 35% Cost Savings

WPS Software introduced advanced features for WPS AI, transforming user productivity and content accuracy. Previously limited to basic spell checks, WPS AI now provides AI-powered spell check, grammar correction, and document polishing. Users see categorized error views with explanations, streamlining revisions and enhancing writing quality. Additionally, WPS AI's automated PowerPoint generation supports users in creating full presentation outlines or converting documents into slides with a single prompt, saving time and increasing work efficiency. With Claude 3's expansive context window, WPS AI performs precise content extraction, delivering accurate and professional results with minimal input.

Through its collaboration with AWS, WPS Software deployed WPS AI's generative AI capabilities globally in just two months, reducing lead time by one-third compared to previous deployments. This swift rollout helped WPS Software respond quickly to market demand for AI-driven office tools and deliver transformative experiences. WPS Software reported a 30 percent increase in R&D efficiency as a result of generative AI on AWS, freeing resources to focus on further innovations in the WPS Office suite.

Ning Zhang highlights, "The implementation of WPS AI also resulted in a 35 percent reduction in operational costs, demonstrating the cost-effectiveness of generative AI on AWS solutions. AWS's scalable infrastructure supported WPS Software in optimizing resource allocation while maintaining high-quality performance for millions of users." The success of these generative AI applications has positioned WPS Software as a leader in AI-enhanced office tools, strengthening its competitive edge in the global market.

Today, over 200 million overseas users benefit from WPS AI's capabilities, including advanced spell check, text rewriting, and automated PowerPoint generation. These features significantly improve content accuracy, usability, and productivity across various sectors. Acting as a 24/7 virtual assistant, WPS AI supports enterprise managers and other users by providing real-time insights and assisting in content creation for polished results on demand.

Looking forward, WPS Software plans to deepen its use of generative AI on AWS to further enrich the WPS Office suite, driven by its “All in AI” initiative. Ning Zhang reflects, “With a solid foundation in AI and cloud technology on AWS, WPS Software is well-positioned to advance AI-driven smart office solutions that meet the evolving needs of businesses and individuals worldwide.”

About WPS Software

Founded in 1988, WPS Software is a global leader in software products and services, supporting over 600 million active devices each month. WPS Software serves governments, businesses, and individual users worldwide. Its flagship product, WPS Office, is compatible across all major systems and supports multi-device and multi-screen use, online collaboration, and AI-powered content generation for both personal and professional users.

AWS Services Used

Amazon Bedrock

The easiest way to build and scale generative AI applications with foundation models

[Learn more »](#)

Amazon CloudFront

Securely deliver content with low latency and high transfer speeds

[Learn more »](#)

Amazon Elastic Kubernetes Service

The most trusted way to start, run, and scale Kubernetes

[Learn more »](#)

Amazon CloudWatch

Observe and monitor resources and applications on AWS, on premises, and on other clouds

***Disclaimer: The mentioned AWS services relating to generative AI are only available or previewed in the Global Regions. Visit [aws.amazon.com](#) for more details. AWS China promotes these AWS services relating to generative AI solely for China-to-global business purposes and/or advanced technology introduction.**
