Nasdaq Delivers Sustainability Insights with AI-Powered Serverless Platform

Nasdaq built on Amazon Web Services (AWS) to help its customers reduce the manual effort required for sustainability and environmental, social, governance (ESG) disclosures.

Nasdaq IR Insight is an investor relations platform that enables customers to manage investor events, report internally to executive teams, and find new investors to target. Hear from James Tickner, head of product, IR Intelligence at Nasdaq, discuss how the company's customers faced new requirements to report on sustainability and ESG impact, which necessitated the creation of new documents. To help customers meet these requirements, Nasdaq created a platform called [Nasdaq Sustainable Lens](#), using [Amazon SageMaker](#).

Hi, I can connect you with an AWS representative or answer questions you have on AWS.

This solution analyzes tens of thousands of documents to reduce the manual effort previously needed to analyze these documents against their competitors, understand their sustainability and ESG trends in the wider market with on-demand insights.
