Smartsheet Enhances Deployment Efficiency and Reduces Costs Using Amazon ECS and AWS Fargate

Learn how Smartsheet leverages fully-managed serverless container orchestration to boost deployment frequency and engineering throughput

Hi, I can connect you with an AWS representative or answer questions you have on AWS.

Need more info? Highlight any text to get an explanation generated with AWS generative AI.

Smartsheet relies on [Amazon Elastic Container Service \(Amazon ECS\)](#) with [AWS Fargate](#), a fully-managed, serverless container orchestration service, to improve deployment velocity and engineer capacity. On the AWS serverless platform on AWS, Smartsheet can deploy more frequently, increase throughput, and reduce engineering time to deploy from hours to minutes. "We've gone from weekly deployments to

2

that we do multiple times a day, and from what used to be hours of at least two engineers' time, we've been able to shave that down to several minutes," said Skylar Graika, senior principal software engineer at Smartsheet. Smartsheet used Amazon ECS with AWS Fargate, and [AWS CodePipeline](#) to transition from coupled deployments to independent deployments enabling faster, more isolated releases, reducing interdependencies. The company was able to streamline the deployment process, eliminate manual upgrades and patches, and ensure consistent and reliable workloads. Within the last year, Smartsheet was able to scale out its capacity by 50x, and by leveraging deep integrations across AWS services, the company was able to improve efficiencies and simplify its security and compliance process. Additionally, by adopting [AWS Graviton](#) with the Fargate deployments, Smartsheet has seen a 20 percent reduction in cost.

To learn more about how Smartsheet was able to drive these outcomes, watch the [re:Invent 2023 session](#) or read this [blog](#).

Amazon ECS

Amazon Elastic Container Service (ECS) is a fully managed container orchestration service that helps you to more efficiently deploy, manage, and scale containerized applications.

[Learn more »](#)

AWS Fargate

AWS Fargate is a serverless, pay-as-you-go compute engine that lets you focus on building applications without managing servers.

[Learn more »](#)

AWS Graviton

AWS Graviton is a family of processors designed to deliver the best price performance for your cloud workloads running in Amazon Elastic Compute Cloud (Amazon EC2).

[Learn more »](#)

AWS CodePipeline

AWS CodePipeline is a fully managed continuous delivery service that helps you automate your release pipelines for fast and reliable application and infrastructure updates.
