Carrier Uses Amazon Bedrock to Help Customers Achieve Their Sustainability Goals

Overview

As a global leader in intelligent climate and energy solutions, [Carrier Global Corporation](#) (Carrier) strives to advance sustainable, efficient building environments and help customers reduce their carbon footprints. One of its products, Abound Net Zero Management, is designed to optimize energy efficiency and sustainability in buildings. Carrier wanted to scale this product for a global audience, especially in regard to managing and interpreting diverse utility data across different regions and languages.

Hi, I can connect you with an AWS representative or answer questions you have on AWS.

Carrier’s Solution

On Amazon Web Services (AWS), Carrier harnessed generative artificial intelligence (AI) to scale and enhance the functionality of Abound Net Zero Management. Crucial to this mission are [Amazon Bedrock](#), a fully managed service that makes it simple to build and scale generative AI applications with foundation models, and [Amazon Textract](#), a machine learning service that automatically extracts text, handwriting, layout elements, and data from scanned documents.

Using generative AI built on Amazon Bedrock, Abound Net Zero Management can easily ingest utility data and combine it with historical trends and predictive analytics to provide insights that help customers manage their portfolio’s energy consumption and reduce their carbon emissions. With the new solution, customers can upload their utility bills in their local languages, which the solution analyzes to populate data that is used to generate actionable energy-saving insights.

“The solution that we created uses Amazon Textract to upload customer’s utility bills and extract all the textual information from those,” says Lexie Webel, Product AI lead at Carrier. “We took that textual information and passed it into a large language model offered by Amazon Bedrock to be able to intelligently process that data and grab those data points for us.”

Benefits of Using AWS

On AWS, Carrier can deploy Abound Net Zero Management at scale while keeping customer data secure. Thanks to AWS AI services and to the scalability of the cloud, the company can extend this service to a global audience while maintaining consistent performance. “The good part about this is we only had to do a few clicks and a few lines of code, and we made it available for our entire customer base, both in the United States and globally,” says Webel.

This solution is still in the pilot phase, but once commercially available, it will enable customers to  their carbon footprints and offer insights into energy usage that lead to more sustainable choices. Additionally, customers will

benefit from a streamlined, user-friendly experience, which makes it simpler to interact with Carrier’s products, track emissions, and optimize usage.

“Now that we can extract [customers’] data from their bills they can actually see all of the different analytics and insights that Abound Net Zero Management provides, ultimately helping them reach their sustainability goals, which ties back into Carrier’s main mission of helping to create a safer, healthier, and more sustainable world,” says Webel.

AWS Services Used

Amazon S3

Amazon Simple Storage Service (Amazon S3) is an object storage service offering industry-leading scalability, data availability, security, and performance.
