Overview

[Kambi](#), a sports betting software-as-a-service provider, was rapidly expanding to new global regions and realized that further expansion would require centralizing its network operations for greater management control. So, it turned to Amazon Web Services (AWS) for a scalable solution that could improve operations and enhance observability at the same time. Kambi ended up increasing operational efficiency by 50 percent, reducing its code base by 20 percent, streamlining its network setup, improving overall connectivity, and strengthening its security posture.

Opportunity | Kambi Uses AWS Cloud WAN to Centralize Network Operations

Kambi is a trusted partner to more than 40 sports betting operators around the world—including Bally's, LeoVegas, LiveScore Group, and Rush Street Interactive—and has been successfully deploying production solutions on AWS for several years. Its hybrid network infrastructure includes several data centers, multiple [Amazon Virtual Private Clouds](#) (Amazon VPCs) to define and launch AWS resources in logically isolated virtual networks, and [AWS Direct Connect](#) to create dedicated network connections to AWS.

But as the company's AWS footprint grew, enhancements were required so that its network infrastructure could continue to adequately scale. It needed to link its different parts into a single network for central management and management while simultaneously increasing its service limits. To do this, Kambi chose [A](#)

provides a central dashboard for making connections between a company's branch offices, data centers, and Amazon VPCs.

"We're expanding across the United States and Latin America," says Martin Norum, head of engineering services at Kambi. "We needed to increase the number of Amazon VPCs we could manage across our network, and AWS Cloud WAN emerged as the best choice."

Solution | Increasing Operational Efficiency by 50% and Improving Security

In collaboration with its partner [Playground Tech](#), Kambi seamlessly migrated to AWS Cloud WAN in just 3 months.

As a result, Kambi increased its operational efficiency by 50 percent. The company previously shared a single account among four teams, all of whom needed to be involved when making network changes. Now, two teams can accomplish the same tasks. Moreover, using the native automation capabilities of AWS Cloud WAN, Kambi reduced its code base by 20 percent and shortened the time needed to set up new Amazon VPCs from weeks to days.

Kambi's increased observability has also further strengthened its security posture. Using AWS Cloud WAN to gather its metrics, Kambi can create Grafana dashboards that are accessible across the company. With better observability, the company can see when any incidents happen on the network and address them with even greater efficiency. Meanwhile, increased peering limits have improved the connectivity between Kambi's Amazon VPCs. With its new solution, Kambi can transmit more than five times the data over the network than previously.

"Using AWS Cloud WAN, we've built a future-ready, scalable, and efficient network infrastructure to support our teams in creating better sports betting experiences," says Marc Modin, DevOps engineer at Playground Tech and consultant to Kambi.

Outcome | Paving the Way for Future Expansion

Using AWS Cloud Wan as a unified networking platform for connectivity, Kambi has successfully reduced the complexity of its hybrid network infrastructure. In doing so, it has reinforced its ability to reliably expand to new locations. Looking ahead, the company aims to further optimize costs and reach new markets

“A key part of Kambi’s business strategy is to expand into new geographical locations,” says Norum. “Having a centralized, scalable solution on AWS helps us be more locally present in new regions.”

About Kambi

Kambi is a leading, independent premium sports betting technology and services provider. A trusted partner to more than 40 operators across the globe, Kambi has a proven track record of excellence in online and retail sportsbook provision.

AWS Services Used

AWS Cloud WAN

AWS Cloud WAN provides a central dashboard for making connections between your branch offices, data centers, and Amazon Virtual Private Clouds (Amazon VPCs)—building a global network with only a few clicks.

[Learn more »](#)

AWS Direct Connect

The AWS Direct Connect cloud service is the shortest path to your AWS resources. While in transit, your network traffic remains on the AWS global network and never touches the public internet.

[Learn more »](#)

Amazon Virtual Private Cloud

Amazon Virtual Private Cloud (Amazon VPC) gives you full control over your virtual networking environment, including resource placement, connectivity, and security.
