Vyond Reduces Generative AI Video Costs by 20% Using AWS Inferentia

Vyond lowered the cost of its generative AI-based application, which converts text into video images, while ensuring scalability to support millions of customers globally using AWS processors.

Meets rigorous enterprise-level requirements

Overview

[Vyond](#) aimed to enhance its enterprise-grade video creation solution, Vyond Studio, by introducing Vyond Go—a generative artificial intelligence (AI)-powered text-to-image service that produces high-quality videos in seconds. To facilitate hosting for multiple generative AI models and ensure scalability for a global customer base, the company chose to run Vyond Go on AWS.

To create video assets in seconds, Vyond uses Stable Diffusion, a text-to-image model, which Vyond hosts on [Amazon Elastic Compute Cloud \(Amazon EC2\) Inf2 instances](#). By running on AWS, Vyond Go turns text prompts into videos at 20 percent lower cost.

Opportunity | Accelerating Video Production Through Generative AI

In 2021, [Vyond](#)—a global video creation platform based in the US with offices in Hong Kong and Taiwan—secured \$50 million in growth capital to enhance its position in the enterprise video creation market. The company helps businesses craft high-quality animated videos, fostering engagement and education among employees and customers.

Vyond's flagship offering is Vyond Studio, a drag-and-drop application that utilizes artificial intelligence (AI) for efficient video creation. In early 2023, the company sought to extend its product portfolio with a generative AI-based application that could create high-quality videos with a few text prompts. "We saw how generative AI models could produce unique stylistic videos with just a few words," explains Matt Harney, chief technology officer at Vyond.

Vyond required infrastructure with the computing power to host deep learning, text-to-image models, and the flexibility to scale quickly as demand for the new service grew. The company turned to Amazon Web Services (AWS), which was already providing the infrastructure for Vyond Studio. "We knew AWS could help us stay up to date and keep pace with advancements in generative AI technology," says Harney. "AWS offered the elasticity we needed, plus access to the latest-generation GPUs driving today's AI developments."

Solution | Reducing Costs by 20% Using Amazon EC2 Inf2 Instances

Vyond replicated the AWS architecture used in Vyond Studio when implementing Vyond Go. To enhance scalability and cost efficiency, the company utilized [Amazon Elastic Compute Cloud \(Amazon EC2\) Inf2 instances](#) to host several machine learning (ML) models, including Stable Diffusion, a generative AI model that produces unique stylistic images from text and image prompts. In addition, Vyond deployed [Amazon EC2 Inf1 instances](#) for other AI-powered features, such as visual content search, video-to-action, and background removal. Says Harney, “By adopting Amazon EC2 Inf2 instances for our generative AI workloads, we saw a saving of 20 percent.”

Vyond also implemented [Amazon Elastic Kubernetes Service](#) (Amazon EKS), a managed Kubernetes service, for automated application deployment, scaling, and administration, and for heavy server workloads to reduce the overall compute cost.

For ongoing optimization, the company works with [AWS Enterprise Support](#), including a technical account manager, who provides operational assistance and development guidance. “That’s the advantage of working with AWS,” says Harney. “We get great support on the best way to run our different AI workloads in the cloud, so we’re constantly improving our infrastructure.”

To maximize operational performance, Vyond is also using [Amazon OpenSearch Service](#) for logging and utilizing [Amazon Managed Service for Prometheus](#), as well as [Amazon Managed Grafana](#) for monitoring and maintaining consistent response times for its large container deployment.

By running on AWS, Vyond can ensure that Vyond Go meets stringent enterprise-level security standards. This involves compliance with ISO 27001, GDPR (General Data Protection Regulation), CCPA (California Consumer Privacy Act), and FedRAMP (Federal Risk and Authorization Management Program) certification for US government agency business. Fei Yu, senior research and development manager at Vyond, adds, “Using AWS, we can support all the latest advancements in AI while ensuring optimal security, so business customers get the compliance protection they need.”

Outcome | Transforming Text Prompts into Videos in 30 Seconds

Millions of users and more than 20,000 businesses worldwide are using Vyond Studio and Vyond Go for swift text-to-video generation. Utilizing the capabilities of generative AI on AWS, these enterprises transform text prompts into videos in 30 seconds, saving weeks of work. “We’re helping countless clients overcome the apprehension and cost associated with making high-quality enterprise videos,” states Harney.

Vyond Go provides minimal text prompts for the video's topic, vibe, format, layout, and location. Using these prompts, the solution’s generative AI software running on AWS creates the video and gives customers tools to make simple edits to the content. In addition, customers can use Vyond Studio to edit and customize nearly any aspect of their video to align with its brand and use case.

Millions worldwide are using Vyond Studio and Vyond Go to train, educate, and engage in more effective ways. Approximately 65 percent of Fortune 500 companies trust Vyond to create videos in compliance with data privacy legislation around the globe. “Using AWS, we’re making it easy for people to create engaging content,” Harney concludes. “We’re helping our customers quickly and easily turn any kind of communication into video and with complete control over the process and the finished product.”

About Vyond

Founded in 2007, Vyond offers an enterprise-grade video creation studio for businesses to develop relevant and engaging video content. Millions of users and more than 20,000 businesses worldwide trust Vyond to produce high-quality video content.

AWS Services Used

Amazon Elastic Compute Cloud

Amazon Elastic Compute Cloud (Amazon EC2) offers the broadest and deepest compute platform, with over 750 instances and choice of the latest processor, storage, networking, operating system, and purchase model to help you best match the needs of your workload.

[Learn more »](#)

Amazon Elastic Kubernetes Service

Amazon Elastic Kubernetes Service (Amazon EKS) is a managed Kubernetes service to run Kubernetes in the AWS cloud and on-premises data centers.

[Learn more »](#)

Amazon OpenSearch Service

Amazon OpenSearch Service makes it easy for you to perform interactive log analytics, real-time application monitoring, website search, and more.
