Overview

In recent years, companies have shifted from viewing data as a liability to recognizing it as a valuable asset. ALTR, an automated data access and security solution, built on Amazon Web Services (AWS), helps companies protect and govern sensitive data in the cloud.

value of their data while maintaining compliance, security, and governance. And now, with a serverless architecture, ALTR can scale this solution globally at an affordable price.

Opportunity | Using AWS to Help Companies Unlock Data for ALTR

ALTR helps companies get the most out of their data within the constraints of legislation, data best practices, and security standards. Its software monitors data in the cloud and helps users create access policies, classify data, perform observability analyses, and protect data with tokenization.

ALTR's solution was born on AWS. As the company grew across verticals and regions, it chose to go serverless for maximum efficiency. "Serverless technology can be deployed in different regions without costing astronomical amounts," says Kevin Rose, director of engineering at ALTR. "That's been a key factor in our ability to expand."

Solution | Doubling in Size While Keeping Costs Low

ALTR's serverless infrastructure is powered by AWS services such as [Amazon API Gateway](#), a fully managed service to create, maintain, and secure APIs at virtually any scale, and [AWS Lambda](#), a serverless, event-driven compute service. It also uses [Amazon Neptune](#), a serverless graph database, to quickly access metadata and use it to make governance decisions, as well as a [Snowflake](#) data warehouse.

"Using serverless technologies, and AWS as a whole, we have built a service that is exceptionally scalable without having to scale costs," says Chris Struttman, cofounder and chief technology officer at ALTR. "Our business has doubled over the past year, and our AWS production expenses only increased by 2.4 percent."

Thanks to these efficiencies, ALTR can offer highly competitive pricing, with some onboarding options starting at no cost. The solution is also highly available, providing customers with virtually uninterrupted service. The inherent flexibility of serverless architecture means that as a customer's needs grow, the solution grows with them. Customers can start small and scale up without hefty up-front costs.

ALTR has also streamlined its security and compliance checks. "With the serverless capabilities of AWS, we no longer have to stress about updating virtual servers," says Rose. "Instead, we manage notifications and events to verify that our AWS Lambda functions and software development lifecycle checks remain intact. We can concentrate on software security without being burdened by infrastructure security concerns." With this robust framework, ALTR's customers enjoy a secure and reliable service, helping them focus on their operations with greater peace of mind.

Outcome | Democratizing Advanced Data Features for Customers on AWS

Using AWS, ALTR expanded its solution to new regions without compromising price or performance. This initiative also stimulated significant business growth; the company's annual recurring revenue and customer count grew by more than 2 times. Its Snowflake-based annual recurring revenue also grew by more than 472 percent.

"When we started, we were scrutinized and criticized for being in the cloud," says Struttman. "Today, our cloud-based data access and security solution wins awards. The decision to be born in the cloud on AWS has really paid off."

About ALTR

ALTR offers a no-code cloud environment that provides data intelligence, governance, and security to empower the data-driven enterprise.

AWS Services Used

Amazon API Gateway

Amazon API Gateway is a fully managed service that makes it easy for developers to create, publish, maintain, monitor, and secure APIs at any scale.

[Learn more »](#)

AWS Lambda

AWS Lambda is a compute service that runs your code in response to events and automatically manages the compute resources, making it the fastest way to turn an idea into a modern, production, serverless applications.
