AWS improves understanding and analysis of football tackles

A defender's split-second decision can be the difference between a game-changing tackle and a touchdown. For years, the NFL has sought to quantify these crucial moments, but the complexity of measuring the different factors contributing to a made or missed tackle made this a challenging task. Enter Amazon Web Services (AWS) and the NFL's Next Gen Stats (NGS) team, who together embarked on an ambitious project to build Tackle Probability, a new AI-powered model that changes how we understand and analyze tackles in football.

The NFL: Powered by AWS

NFL Big Data Bowl

AWS and the NFL invite engineers, data scientists, students and other data analytics enthusiasts with no sports experience required to the NFL Big Data Bowl to use data to change how the game is played and coached.

AWS and NFL Power the Big Data Bowl

Generative AI is transforming sports

From startups to sports franchises, organizations trust AWS to innovate with generative artificial intelligence.

How does AWS level up game-day?

- ✓ **Cloud-based operations** enable a cost-effective, flexible, and sustainable model for more dynamic experiences.
- ✓ **Machine learning** amplifies data capture to fuel innovative experiences for fans, players, and teams.
- ✓ **Real-time data** from games leverage AWS’s broad range of cloud-based machine learning capabilities to generate model outputs such as formations, routes, and tackles.
