The global datasphere is expected to grow to [163 zettabytes by 2025](#). How can c those mountains of unstructured data? With its managed vector search database solution hosted on

Amazon Web Services (AWS), [Qdrant](#), an [AWS Partner](#), aims to help companies quickly and simply find the information they need.

“Our solution is industry-agnostic and has applications across many use cases,” says Andre Zayarni, cofounder and CEO of Qdrant. “It helps enterprise solutions to connect private data and conversationally find information.”

Developing an Open-Source Vector Database Using AWS Solutions

Qdrant is a startup looking to power the next generation of generative artificial intelligence (AI) applications with advanced and high-performing vector similarity search technology. The company created its vector search database to help enterprise companies with near-real-time data retrieval and to provide the tools to write generative AI solutions.

Machine learning engineers, data scientists, and AI engineers alike can use the Qdrant database to run queries on unstructured data and gain insights to inform business decisions and generative AI solution development. The solution covers use cases such as facial recognition, anomaly detection, and product recommendations.

The company's main priorities for its vector database include performance, scalability, and ease of use. Users can find relevant information quickly with low latency and reduced resource usage. Additionally, the Qdrant database helps to meet large data requirements at affordable prices.

Qdrant made the database available in 2021 as an open-source solution. Since the beginning of 2023, Qdrant has also released a commercial version of the database as a managed cloud solution on AWS, and this version is available on [AWS Marketplace](#).

"We needed a commercial solution provider," says Zayarni. "We asked our community of early cloud adopters, and they told us that AWS was their most desirable destination."

Saving Costs and Increasing Reliability Using AWS

Qdrant powers its solution using AWS storage and compute solutions. By using fully managed services, it can scale effortlessly and reduce the cost of running its resources. The company has saved more than 30 percent in total costs by hosting its solution on AWS infrastructure.

"Our experience using AWS has been great," says Zayarni. "It's a proven, stable solution that helps us provide reliable uptime to our customers."

Introducing New Features for Qdrant

Qdrant continues to refine its solution with new updates. It plans to add scalability for larger companies that use the software. A hybrid software-as-a-service solution with multi-architecture is also in the works.

"We're constantly asking the AWS team for advice and suggestions on how to improve," says Zayarni. "It's great to have a support system as we keep optimizing our solution."

Leading Cloud Innovators in Europe

Learn how leading organizations in Europe across industries trust AWS to drive innovation at every level of their business.

Get Started

Organizations of all sizes across all industries are transforming their businesses and delivering on their missions every day using AWS. Contact our experts and start your own AWS journey today.
