

Booking.com on AWS

Seamlessly connecting millions of travelers with memorable experiences every day—including accommodation, flights, rides, and attractions—Booking.com is one of the world’s leading online travel platforms. Its mission is to make it easier for everyone to experience the world. No matter who you are or where you want to go, Booking.com can help make it happen. The company uses Amazon Web Services (AWS) and generative artificial intelligence (AI) to put more than 150 petabytes of data to work to improve booking services. Collaborating with AWS Professional Services, and using technologies such as Amazon SageMaker and Amazon Bedrock, it has built a scalable machine learning framework that’s accelerating experimentation and innovation.

For [Booking.com](#) customers, recommendations are a big part of the experience. The online travel platform uses Amazon Web Services (AWS) to handle 150 petabytes of data, applying generative artificial intelligence (AI) and fine-tuning language models to provide users with relevant, personalized suggestions for their next travel experience.

Continuous Innovation

Booking.com at AWS re:Invent 2023

Rob Francis, senior vice president and chief technology officer at Booking.com, takes the stage at AWS re:Invent 2023 to talk about how the company is making the booking experience easier for customers worldwide. One of the ways it’s doing this is through an AI Trip Planner, which enhances retrieval augmented generation to personalize customer accommodation recommendations. Using generative AI and services such as [Amazon SageMaker](#), Booking.com continues to look at new ways to create smoother customer journeys.
