

iFood on AWS

For iFood, revolutionizing the food delivery industry is all about connection: bringing customers, restaurants, and delivery partners together on a seamless platform. The company’s collaboration with Amazon Web Services (AWS) is helping the business grow across Latin America, where it handles millions of orders a month for more than 300,000 restaurants. The online food delivery firm, which caters to food lovers Brazil, established the iFood Artificial Intelligence (AI) Academy in 2019 to accelerate innovation. Its internal teams gain machine learning skills through AWS Training and Certification, and use services such as Amazon SageMaker to improve delivery service-level agreements, bolster security, and elevate experiences for both customers and restaurants.

iFood is changing the online food delivery experience by investing in new technology and training. With support from Amazon Web Services (AWS), and using machine learning tools in [Amazon SageMaker](#), it is providing a better service to customers and restaurants, and building a foundation for growth across Latin America.

Generative AI

2024

iFood: an Artificial Intelligence

In this video, Cardoso talks about how the iFood Product (GDP) in 2022, uses services such as Amazon SageMaker to standardize and facilitate implementation of machine learning models. At the moment the order is placed until delivery and in fraud prevention processes. In fact, according to the director, when a user enters the app and makes a purchase through iFood, they go through more than 100 machine learning models. Learn the details of this story and iFood’s future plans with for AWS generative artificial intelligence.

How iFood Quickly Built a Virtual Waiter with Amazon Bedrock

A team dedicated to innovation meets the easiest way to build and scale generative AI with foundation models. This is the story of how iFood used [Amazon Bedrock](#) to create a chat experience with a difference. Renan de Padua, head of generative AI, talks about his team's fast-paced proof of concept of virtual waiter Garçon—a tool that will take users' interactions with iFood to the next level.
