Broadridge Financial Solutions Modernizes Data Platform with AWS to Accelerate Innovation

Broadridge Financial Solutions transformed its Performance Reporting platform on Amazon Aurora and Amazon Redshift, migrating billions of transaction records in hours with AWS Glue.

[Overview](#) | [Opportunity](#) | [Solution](#) | [Outcome](#) | [AWS Services Used](#)

2.3 billion

transaction records migrated in hours

50%

lower platform costs

30%

less time spent on administrative tasks

Weeks saved in building production environments

Overview

[Broadridge Financial Solutions](#) (Broadridge) delivers technology-driven software products to a range of financial services providers. To develop its Performance Reporting solution with greater agility, the company migrated the platform from on premises to Amazon Web Services (AWS).

Broadridge uses [Amazon Aurora](#) as its database service and [Amazon Redshift](#) for its data warehouse, transferring terabytes of data using [AWS Glue](#) within hours. With its Performance Reporting solution on AWS, Broadridge has reduced platform costs by 50 percent while accelerating time-to-market for new features.

Opportunity | Migrating to AWS for a Flexible Infrastructure

[Broadridge Financial Solutions](#) (Broadridge) is a global fintech that provides critical infrastructure to banks, broker-dealers, and asset and wealth managers. Its Performance Reporting solution gives investment managers a platform to access daily updates on portfolio performances. The platform integrates and unifies data across order, portfolio, and risk management systems. It also provides financial services companies with a suite of analytics tools for returns computations, benchmarking, historic performance calculations, as well as other measures.

As the world's financial landscape has evolved, digitally native newcomers have begun using data analytics and artificial intelligence (AI) to make investment decisions. Recognizing this shift and wanting to help its customers compete more effectively, Broadridge set out to transition its Performance Reporting platform from on premises to a flexible infrastructure that can support AI and machine learning (ML) in the future.

Shantvijay Puranik, associate vice president–business at Broadridge, says, “The Performance Reporting application must efficiently manage continuously expanding data to maintain a comprehensive historical record for reporting purposes. It also requires the ability to scale processing capacity up and down during month-end and periods. After thorough evaluation, Amazon Web Services [AWS] was chosen as the dependable cloud platform for this solution.”

The company chose to migrate its Performance Reporting platform to AWS, which was already supporting the company's Policies and Insights solution to simplify corporate governance. However, Broadridge needed a suitable approach for transferring data from its Performance Reporting's data warehouse to AWS. Barath Ravichander, technology architect at Broadridge, explains, "Our legacy version of VMware Greenplum made it challenging to migrate the environment to the cloud using standard tools. We needed another approach."

Solution | Modernizing Its Performance Reporting Platform on AWS

Working with an AWS Technical Account Manager, Broadridge migrated its platform data from VMware Greenplum using [AWS Glue](#), a serverless data integration tool for preparing and moving data.

The company decided to transition smaller customers—those with Performance Reporting workloads under 15 million transactions—to [Amazon Aurora](#), a serverless database service. Meanwhile, for customers dealing with over 10 billion trade records, Broadridge migrated its workloads to [Amazon Redshift](#), a cloud-native data warehouse.

The migration was initiated with only 10 lines of code, with 2 terabytes of data transfer to AWS taking only 4 hours. Broadridge moved 2.3 billion transaction records from Greenplum to Amazon Redshift in under 8 hours for large clients.

By transitioning its Performance Reporting platform from an on-premises infrastructure to AWS, Broadridge reduced platform costs by 50 percent, freeing up resources to invest back into development. In addition, the company has lowered management time by up to 30 percent. "By using AWS managed services, we're no longer spending time on routine administration tasks like spinning up bare-metal servers," says Barath.

Furthermore, Broadridge has increased its Performance Reporting platform's performance by 45 percent by switching from an online analytical processing (OLAP) system with Greenplum to an online transaction processing (OLTP) system on AWS. The OLTP provides shorter response times compared to OLAP and is optimized for high-frequency, high-volume transactional data in line with the needs of the Performance Reporting solution.

Outcome | Accelerating Innovation with Agile Development

By adopting a modern data architecture on AWS, Broadridge can innovate its Performance Reporting application faster and quickly launch new features to enhance its solution’s value for customers. “We can save weeks in building production-ready environments with our data on AWS, deploying and updating code quicker,” says Barath.

Furthermore, the Performance Reporting development team can swiftly and regularly implement changes while experimenting with new ML models for creating improved tools that offer enhanced support to investment managers.

Barath says, “By running our Performance Reporting platform on AWS, our team is driven by the opportunity to innovate and learn, which directly benefits our products and customers.” Shant concludes, “AWS accelerates our future plans of incorporating AI and insights, helping us to deliver a top-tier solution to our clients more efficiently and with a faster time-to-market.”

About Broadridge Financial Solutions

Headquartered in New York, Broadridge Financial Solutions is a fintech generating more than \$6 billion a year in revenue. Its technology underpins the daily trading of over \$10 trillion of equities, fixed income, and other securities globally.

AWS Services Used

AWS Glue

AWS Glue is a serverless data integration service that makes data preparation simpler, faster, and cheaper. You can discover and connect to over 70 diverse data sources, manage your data in a centralized data catalog, and visually create, run, and monitor ETL pipelines to load data into your data lakes.

Amazon Aurora

Amazon Aurora provides built-in security, continuous backups, serverless compute, up to 15 read replicas, automated multi-Region replication, and integrations with other AWS services.

[Learn more »](#)

Amazon Redshift

Tens of thousands of customers today rely on Amazon Redshift to analyze exabytes of data and run complex analytical queries, making it a widely used cloud data warehouse.
