

AWS re:Invent 2023

NVIDIA at AWS re:Invent 2023

Hi, I can connect you with an AWS representative or answer questions you have on AWS.

Need more info? Highlight any text to get an explanation generated with AWS generative AI.

In this AWS re:Invent 2023 video, Jensen Huang, founder and CEO of NVIDIA, chats with AWS CEO Adam Selipsky to discuss how NVIDIA and AWS are working together to enable millions of developers to access powerful technologies needed to rapidly innovate with Generative AI. NVIDIA is known for its cutting-edge GPUs and contributions to the field of AI. The company is combining this expertise with the highly scalable, reliable, and secure AWS Cloud infrastructure to help AWS customers run advanced graphics, machine learning, and generative AI workloads at an accelerated pace. As part of this collaboration, AWS will be the first to bring the NVIDIA GH200 Grace Hopper Superchip to the cloud. AWS will also provide the cloud infrastructure for Project Ceiba, an NVIDIA initiative to build the world's fastest AI supercomputer.

Named after the largest tree in the Amazon, Project Ceiba will harness the power of 16,384 Grace Hopper Superchips to process AI workloads at scale. This AI supercomputer will be integrated with DGX Cloud, NVIDIA's AI factory hosted on AWS. With these capabilities, AWS customers gain unprecedented access to extraordinary computational power, enhancing their ability to conduct advanced AI research and develop complex AI models.

[Click here](#) to learn how NVIDIA and AWS are delivering powerful GPU-based solutions on the cloud.

Generative AI is transforming cloud workloads and putting accelerated AI at the foundation of diverse content generation. Driven by a common mission to deliver cost-effective state-of-the-art generative AI to every customer, NVIDIA and

AWS are collaborating across the entire computing stack, spanning AI infrastructure, acceleration libraries, foundation models, to generative AI services."

Jensen Huang

Founder and CEO, NVIDIA

About NVIDIA

Since its founding in 1993, NVIDIA has been a pioneer in accelerated computing. The company's invention of the GPU in 1999 sparked the growth of the PC gaming market, redefined computer graphics, ignited the era of modern AI and is fueling the creation of the metaverse. NVIDIA is now a full-stack computing company with data-center-scale offerings that are reshaping industry.

Customer Speaker: Jensen Huang

Jensen Huang founded NVIDIA in 1993 and has served since its inception as president, chief executive officer, and a member of the board of directors. Since its founding, NVIDIA has pioneered accelerated

computing. The company’s invention of the GPU in 1999 sparked the growth of the PC gaming market, redefined computer graphics, and ignited the era of modern AI. NVIDIA is now driving the platform shift of accelerated computing and generative AI, transforming the world's largest industries, and profoundly impacting society. Huang is a recipient of the Semiconductor Industry Association’s highest honor, the Robert N. Noyce Award; IEEE Founder’s Medal; the Dr. Morris Chang Exemplary Leadership Award; and honorary doctorate degrees from Taiwan’s National Chiao Tung University, National Taiwan University, and Oregon State University. He has been named the world’s best CEO by Harvard Business Review and Brand Finance, as well as Fortune’s Businessperson of the Year and one of TIME magazine’s 100 most influential people. Prior to founding NVIDIA, Huang worked at LSI Logic and Advanced Micro Devices. He holds a BSEE degree from Oregon State University and an MSEE degree from Stanford University.
