Revolutionizing Real Estate Transactions Using AI on AWS with Rexera

Rexera revolutionizes real estate by automating the manual, error-prone closing workflows in real estate transactions, minimizing human involvement so that real estate professionals can speed up transactions, reduce friction, and lower costs.

25%

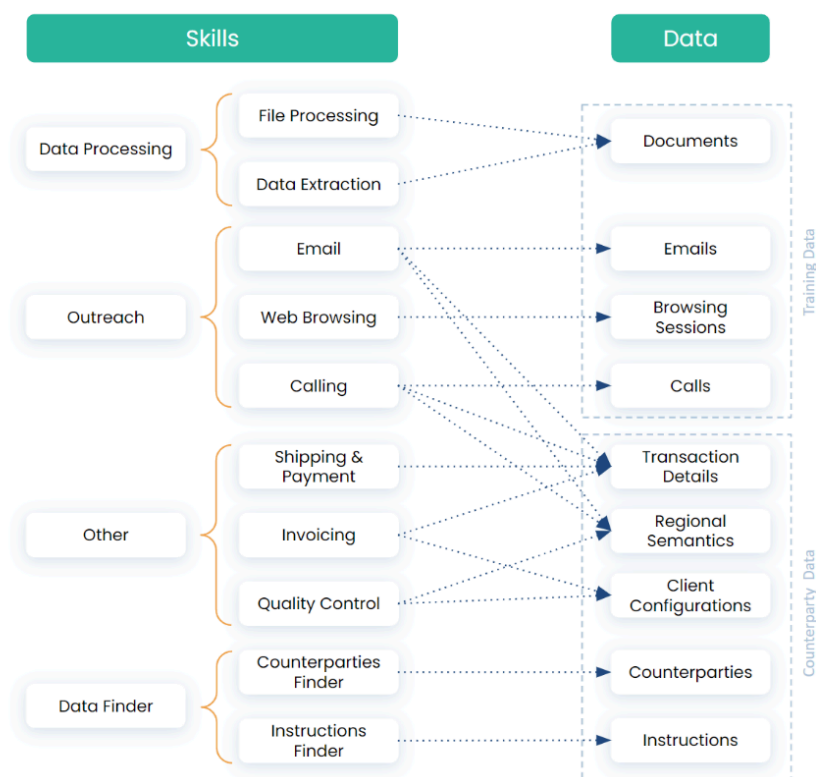

less operational costs for Rexera customers

Overview

When the founders of [Rexera](#) first encountered the laborious manual workflows that are involved in residential real estate transactions, they were shocked at how inefficient the industry was. At the time, they were working at a successful hedge fund with a highly automated back office that used machine learning and statistics to manage billions of dollars in investments. “We could launch a 3-billion-dollar fund on Wall Street in a few days, but to buy a one-bedroom apartment, it took 8 weeks,” says Vishrut Malhotra, CEO and cofounder of Rexera. “If someone could bring the automated workflows that we were used to into the real estate industry, it would be transformational.”

So in 2020, they created Rexera to do just that. Rexera uses Amazon Web Services (AWS) to help real estate professionals close more deals quickly, reduce errors, and increase operational efficiency by up to 70% percent. Using AWS, Rexera processes 5 million pages of real estate documents and facilitates over 5,000 transactions each month, and the first workflow that Rexera developed is now used in 1 percent of all US residential real estate transactions.

Rexera AI Agent

Opportunity | Using Amazon Bedrock to Power Reliable AI Capabilities for Rexera

Rexera provides AI-powered solutions that address key issues in the real estate industry—for example, processing high volumes of legal documents, extracting critical information from those documents, and flagging potential obstacles. These solutions also help minimize manual errors that can have significant legal and

financial consequences, in addition to identifying counterparties such as municipalities, homeowners associations, lenders, and utility companies. “Our solutions use AI to reduce human involvement so that homeowners can buy and sell quickly with much less friction and at lower costs,” says Malhotra. “Furthermore, real estate professionals can spend more time growing their business and less time chasing documents.”

The company began using AWS early on. “We knew from the beginning that we had to find the right cloud provider because we wanted to be able to scale aggressively as we grew,” says Malhotra. “The early setup on AWS was straightforward, and as we scaled, we expanded the number of services that we use.”

One service that Rexera adopted as it grew was [Amazon Bedrock](#), a fully managed service that offers a choice of high-performing foundation models from leading AI companies. The company migrated to Amazon Bedrock from OpenAI. Amazon Bedrock also connected seamlessly to the rest of Rexera’s AWS environment, so the company was able to smoothly incorporate generative AI capabilities into its existing workflows. “On Amazon Bedrock, we could have more control and stability for our operations,” says Malhotra. After a 2-week proof of concept and a 2-week migration, Rexera moved fully into production on Amazon Bedrock in the second quarter of 2024.

Solution | Replacing Manual Workloads with High-Accuracy Models Using Amazon Bedrock

Rexera uses large language models in Amazon Bedrock to process 5 million pages of documents each month. Thus, the company reduces manual document-processing workloads for customers by 99 percent and minimizes document-related risks and inaccuracies. On average, Rexera’s solution saves customers 4 hours on manual document review in each transaction and lowers operational costs by 25 percent. “Using Amazon Bedrock, we can process complex data types, deliver fast results, and improve overall output,” says Malhotra.

Rexera uses Amazon Bedrock to select the perfect AI models for each task, including powerful options like [Meta's Llama](#) and [Anthropic's Claude](#). This variety helps the company enhance its solution and reduce biases and hallucinations. “With a multiple-model approach, we have an accuracy rate of more than 95 percent and need less human intervention in straightforward cases,” says Malhotra. “This helps our team significantly increase processing capacity and service more transactions.”

Processing large, unstandardized documents is a significantly time-consuming task in real estate. To quickly extract details from hundreds of pages in seconds, Rexera built a tool that uses retrieval-augmented g

generative AI architecture that uses specific context data, in this case, real estate documents such as homeowners associations' agreements and property records. This tool reduces manual review time by 80 percent and significantly lowers the risk of missing critical information.

Rexera's solutions free up real estate professionals to focus on their clients rather than spending time on inefficient manual processes. Rexera's AI agents can meticulously verify details in customer communications, run quality control across transactions to flag potential errors or issues, and even call entities such as homeowners associations to confirm property information and request documents. (See figure 1.) With these services, Rexera's customers decrease risks and costs. "Because Rexera takes over manual, error-prone work that no one likes doing, our customers can finally focus on growing their business," says Xenia Cotlearova, marketing director at Rexera.

Outcome | Reducing Friction in Real Estate with Additional Agentic Workflows on AWS

Rexera uses the flexibility of Amazon Bedrock to develop, test, and deploy new features and improvements quickly. "Using Amazon Bedrock, we are years ahead of where we initially planned to be on our product road map," says Malhotra. "Our plan is to continue to build additional agentic workflows for our customers to minimize friction in real estate and reduce the costs, time, and complexity of transactions."

Rexera is also becoming an AWS Partner to continue expanding its solution and customer base. For other startups, Malhotra recommends being proactive in engaging with the AWS team. "It offers dedicated resources and guidance that are tailored to specific project needs, which was invaluable for us to migrate seamlessly and scale our workloads effectively," says Malhotra.

About Rexera

Rexera revolutionizes real estate by automating the manual, error-prone closing workflows in real estate transactions, minimizing human involvement so that real estate professionals can speed up transactions, reduce friction, and lower costs.

AWS Services Used

Amazon Bedrock

Amazon Bedrock is a fully managed service that provides a single API to access and utilize various high-performing foundation models (FMs) from leading AI companies.
