About boodmo

Founded in 2015, boodmo is India's largest online marketplace for automotive components with a huge database of genuine and aftermarket replacement parts offered from over 400 suppliers across the nation. Guiding customers through a dense market, boodmo aims to be the "Spare Parts Expert". Its platform offers a single, trusted channel to ensure a win-win outcome both for car owners and auto parts dealers. To learn more, visit www.boodmo.com (https://boodmo.com/).

Google Cloud Platform Results

- Brought together multiple strands of customer data for analysis in Google BigQuery
- Produced easy to understand reports and clear visualizations with Google Sheets
- Scheduled reports with Google Apps Script to save on developer resources

By investing time and resources in information collection and analysis (<https://boodmo.com/>) has grown largest online marketplace for automotive parts, connecting customers with suppliers on a single

OWOX BI

About OWOX

OWOX provides analytics services for multi-channel businesses, helps implement Google Marketing Platform in ecommerce projects and develops online services based on Google Cloud Platform. OWOX BI helps automate data collection and processing in Google BigQuery, evaluate advertising campaigns based on a customer journey inside the sales funnel and easily get answers to a variety of business questions. OWOX is a certified partner of Google Analytics and Google Cloud Platform, being the first authorized Google Analytics 360 reseller in the EMEA region. To learn more, visit www.owox.com (<https://www.owox.com/>).

partner of Google Analytics and Google

BigQuery (<https://cloud.google.com/bigquery/>)

platform. When boodmo first launched in 2015, there was very little customer data available. In order to make a lasting impact, boodmo would have to gather and analyze most of this information itself. To do that, it needed Google BigQuery. (<https://cloud.google.com/bigquery/>).

“We spent a long time gathering information before we went to market. In this industry, it’s not enough to simply take a common CMS system, upload a few pictures and start selling,” says Yevgeny Sokolnikov, CEO at boodmo. “We’ve seen competitors do that and they never last. We needed a way of collecting customer data, putting it in one place and analyzing it for insights. Google BigQuery helped us to do that.”

Building a complete analytics solution with Google BigQuery

boodmo quickly became a dominant player in its niche, but wanted to build on its relationship with its customers and expand further. To do so effectively, the company had to carry out a comprehensive analysis of its customers as well as identify profitable marketing channels. boodmo had to pull together different strands of data from multiple sources but there was no simple way to do this. The company was using Google Analytics (<https://analytics.google.com/>) and Google Ads (<https://www.google.com/ads/>) to gather data about its web activity and advertising, but it also needed to include more detailed information about its orders.

“I had worked
with OWOX
before, so I knew
how they work
and how much
they could help
us. We decided
to hire them very
quickly. That
was not a
difficult decision
and it saved us a
lot of time.”

—Yevgeny Sokolnikov,
CEO, boodmo

To do that, boodmo turned to OWOX
(<https://www.owox.com/>), a leading Google Partner
and analytics expert. Using the proprietary OWOX BI
Pipeline (<https://www.owox.com/products/bi/pipeline/>),
boodmo combined all the data from Adwords,
Google Analytics and its website in Google
BigQuery. boodmo quickly and easily visualized its
analyses and produced reports with Google Sheets
(<https://www.google.com/sheets/about/>), using Google

Apps Script (<https://developers.google.com/apps-script/>) to automate the process.

“Building a data collection and analysis system like this, Google BigQuery was the natural choice for us,” says Anton Svyta, Digital Analyst at OWOX. “It handles large sets of data very quickly and it integrates with other products like Google Sheets. That makes it easy for us to help our customers resolve their problems.”

High speed analysis, high quality insights

With Google BigQuery and the OWOX BI Pipeline, boodmo was able to gain new insight into its customers’ behaviour and revenue channels much faster than before. It sees up-to-date reports on a regular basis with Google Sheets, allowing it to react to any changes in the market while the OWOX BI Pipeline feeds new data into Google BigQuery in near real-time. By monitoring revenue channels, boodmo has been able to identify the most profitable ways of deploying its marketing resources and optimize its customer acquisition strategy. With Google BigQuery and OWOX, boodmo has built a wealth of knowledge about its customer base and can continue expanding its business into the wider automotive services industry.

“Before, whenever I needed a report from my development team, it would take them a couple of weeks to pull all the data together, review it and then circulate the report,” concludes Yevgeny. “With all the information in one place, my team can go into

Google BigQuery whenever they need to and extract what they want. It allows us to build life cycle models for customers and identify which marketing channels work for us and which ones don't."
