dedicated to creating unforgettable journeys for
independent travelers, by offering more than
300,000 tours and travel activities in 92 countries on
its ecommerce platform. Founded in 2014, the
Taiwanese company partners with travel package
providers around the world to design unique travel
experiences, ranging from ice fishing tours in Alaska,
to market tours with local chefs in Korea, and even a
samurai experience tour in Japan.

"The mission of KKday is to bring our customers the
most original travel experiences and help them
make the most of their trips in an easy way," says
Onnie Fong, CIO at KKday. "That is why we work
closely with local tour providers in different
countries, to continuously improve the experiences
that we offer and broaden our tour selection."

Fong notes that communication is crucial to the
success of KKday's business. As the company has
partners around the world and 12 office locations
across Asia-Pacific, 90% of its internal and external
communication relies on emails. The company
needed reliable and easy-to-use online collaboration
tools to support its daily operations. Before KKday
was officially founded, the founding team used an
email system deployed on its own email server, but it
required substantial resources to manage the server,
and the performance was not ideal. To avoid the
hassle, KKday decided to deploy Google Workspace
(<https://workspace.google.com/>) as its business

collaboration platform from day one, because it offers a fully managed email service and supports easy file sharing.

"Our IT resources were limited, so we were looking for fully managed collaboration tools that deliver high performance, without requiring a lot of operational effort," explains Fong. "Google Workspace perfectly meets our needs by offering a full set of well-integrated and intuitive collaboration and productivity apps."

Supporting efficient communication while reducing operational costs

KKday has been using Google Workspace since 2014. As its business grows, the company sometimes requires technical support to overcome specific challenges and achieve more cost-effective use. [Master Concept](https://hkmci.com/about-master-concept/)

(<https://hkmci.com/about-master-concept/>), a multinational cloud technology advisor and Google Cloud partner, has been giving KKday timely advice along the way. For example, when KKday needed to merge the Google Workspace accounts of a company that it had acquired with its own, Master Concept suggested using a third-party tool to accelerate the integration process. The cloud advisor has also helped KKday apply for a mixed subscription plan of Google Workspace, which is only possible through Google Cloud partners. This

results in savings on operational costs, as KKday is able to upgrade the subscription plan for only the employees in need, instead of all staff.

The KKday team also relies on Gmail

(<https://workspace.google.com/products/gmail/>) as its main communication tool and stores all its files on Google Drive

(<https://workspace.google.com/products/drive/>), which supports easy file sharing through email attachments or URL links. Before adopting Gmail, KKday used to receive a large volume of spam, and have its emails undelivered once or twice a week. When an email was missing or undelivered, the KKday team needed to check with its partners to see whose email server ran into an error, which was time-consuming and disrupted daily operations. Since Gmail filters out most junk mail and ensures successful delivery, KKday now receives 50% less spam and is confident that its email system is not the cause of errors when a missing email event happens.

With Gmail and Google Drive, KKday also no longer needs several dedicated engineers to manage its own mail and file servers. Because Google Workspace tools come with detailed log records, KKday's IT team is able to easily track the changes of emails and files, and resolve frequently encountered issues in less than 10 minutes. Now, it only requires one engineer spending half of his work time to manage KKday's email and file storage system that's used by more than 700 employees.

"The performance of Gmail is way better than our previous email system supported by our own server. We don't have to worry about mail delivery errors any more, and the hardware and labor costs required have been greatly reduced," shares Fong.

Swift implementation of a hybrid work model across 12 office locations

KKday has been using [Google Meet](https://workspace.google.com/products/meet/) (<https://workspace.google.com/products/meet/>) for years to conduct online meetings, which are scheduled through [Google Calendar](https://workspace.google.com/products/calendar/) (<https://workspace.google.com/products/calendar/>), across its 12 office locations in different countries. The live broadcast feature of Google Meet has also enabled KKday to effortlessly hold its biannual town hall meetings virtually for hundreds of employees. As a result, when the COVID-19 lockdown measure required employees to work from home between 2020 and 2022, the KKday staff were able to quickly adapt to remote collaboration and remain highly productive.

After seeing the success of remote work, KKday decided to make the hybrid work model permanent to enhance the company's agility, and give its employees greater autonomy. Fong says that the hybrid work model also fits KKday's company values, which includes the motto "work hard, play hard."

"Together with Gmail and Google Drive, Google Meet and Google Calendar allow our employees to work wherever they want, and empower them with more

freedom, which aligns with our company culture as an independent traveler enabler. Most of the time, I don't even know in which countries my colleagues are working from," Fong adds, laughing.

"The performance of Gmail is way better than our previous email system supported by our own server. We don't have to worry about mail delivery errors any more, and the hardware and labor costs required have been greatly reduced."

—Onnie Fong, CIO, KKday

Safeguarding personal information with enhanced security

As a tourism company, KKday holds a huge amount of personal data of its customers, and therefore sees information security as one of its top priorities.

It uses Classroom

(https://edu.google.com/intl/ALL_us/workspace-for-education/classroom/)

to provide its employees with related training, so that all its courses are organized in one place, and learning records are easily tracked. With Google Drive, the KKday team can easily limit access to files to relevant teams, which prevents data leaks. When a personnel is about to leave the company, all files that they own can be swiftly transferred to another employee, so that no file is lost due to staff changes.

Furthermore, KKday employs Google Account

(<https://www.google.com/account/about/>) as the login authentication method for more than 70 internal systems. With the secure login mechanism supported by Google, KKday is able to ensure the security of its systems without creating a separate identity verification process. The security standards guaranteed by Google also means that KKday is in compliance with information security regulations across all countries.

"By providing Google accounts, Google Workspace has greatly raised the information security level of our business. We can rest assured that our systems comply with the regulations in different countries, and we are always ready for audits," notes Fong.

"For more than
eight years,
Google
Workspace has
not only served
as the backbone
of our business
collaboration,
but it also
fundamentally
transformed our
work culture. We
believe that it
will continue
boosting our
productivity no
matter how big
we grow in the
future."

—Onnie Fong, CIO, KKday

**Enabling global business
expansion plans**

As COVID-19 travel restrictions continue being lifted in many countries, KKday has seen its business grow rapidly, and expects the number of its employees to reach 1,000 by 2023. With fully managed and intuitive Google Workspace tools, KKday can effortlessly support team expansion without adding extra management or training resources. To facilitate its new businesses that require external partners, such as drivers, to access its internal systems, the company plans to leverage the Google account login method for greater security and management simplicity.

Fong says, "For more than eight years, Google Workspace has not only served as the backbone of our business collaboration, but it also fundamentally transformed our work culture. We believe that it will continue boosting our productivity no matter how big we grow in the future."
