

BigChange Apps: improving mobile workforce productivity

About Big Change

Many traditional companies that require fleet management waste time, money managing their mobile workforces because using old technology manual reporting based systems. I wanted to build a solution that would elimin

Since its launch in 2013 BigChange has helped monitor and manage more than eight million jobs and tracked sufficient driving miles to cover over 100,000 trips to the moon. BigChange's cloud-based platform provides organisations with a range of productivity tools for mobile workers and those responsible for managing them. The unique system includes CRM, job scheduling and vehicle tracking functionality, a mobile app for paperless operation as well as a new on-demand booking app that customers can use to facilitate rapid comparison, service scheduling and payment by their own users.

Google Maps Platform Results

- Companies can manage jobs and create reports in real time directly from JobWatch, improving workforce productivity and eliminating manual processes
- Less time spent training customers on how to use the

10% reduction in
fuel use thanks
to direction
optimizations

JobWatch
app

- Customers
have
reported an
average
10%
reduction
in fuel use
and 10
hours less
travel time
per mobile
worker per
month

"Happy
customers
translate into
growth for us.
We have Google
Maps to thank,
by providing the
tools to help us
build a single
platform uniting
drivers and the

back office.
Switching to
Google gave us
great tools in
Google Maps
APIs and advice
on how to use
them to improve
JobWatch. And
since Google
Maps sets the
standard for the
way people
interface with
maps, we spent
less time
training our
customers how
to use
JobWatch."

*—Martin Port, CEO,
BigChange Apps*

BigChange built a mobile workforce management platform called JobWatch that combines a back-office application, vehicle-tracking and mobile apps for drivers. Maps and location services are at the heart of Jobwatch — they power the mobile apps for

drivers and the back-office web app for dispatchers and other staff. The back-office web app lets customers and staff track vehicles in real-time.

Dispatchers can see where all their resources are at any point in time. If there is a problem out in the field, they can immediately send help by dispatching someone nearby. Drivers have access to the mobile app that allows them to to optimize their job schedules and locations.
