"Beyond
providing clean
water for
millions of

people, we're
helping
transform how
charities work by
providing the
highest degree
of transparency
about donation
impact... With
Google Maps
APIs, we were
able to create a
new way for
donors to view
exactly where
their dollars go."

—Alessandra Mosenifar,
Senior Product Designer,
charity: water

charity: water created a new way for donors to view exactly where their dollars go. It built an easily digestible map packed with details and visuals for the thousands of water projects completed as each project is represented by an icon on the map. Using sensors to measure water flow per hour (transmitted weekly), it knows if a water point is broken and learn patterns of usage on a daily or yearly basis. Anyone can take a look at project status and details,

including the average number of liters of water
provided each day.
